Save up to 80%* of your hot water energy costs... rain, hail or shine!

SANDEN. Leading hot water technology
Enjoy the higher STC rewards even before you turn a hot water tap on.

The new Sanden Eco® Plus system is the most energy efficient hot water heat pump currently available on the market. As such, when you buy a Sanden system, you receive the highest amount of Small-scale Technology Certificates (STCs) of any currently available hot water heat pump system. These STCs can be used to discount your purchase price. For more information, ask your local Sanden Dealer or visit www.climatechange.gov.au or www.cleanenergyregulator.gov.au

**STC Rebate Zones**

A Small-scale Technology Certificate (STC) is the equivalent of one megawatt hour of renewable energy generation. The new Sanden Eco® Plus Hot Water Heat Pump System attracts the STCs below, which can be traded for a cash rebate. Eligible households can also claim State rebates.

*Refer to back page for technical specifications. Notes: This table details the number of STCs registered by The Clean Energy Regulator (CER) for the Sanden Eco® Plus Hot Water Heat Pump System. STC values are subject to change without notice and are owned at time of printing. STC values are correct at time of printing and are based on continuous tariff.

Why consider an Air-Sourced Hot Water Heat Pump System?

An air-sourced heat pump absorbs heat from the air and transfers it to heat water. It runs on electricity but is roughly three times more efficient than a conventional electric water heater. It is designed to save energy and money and reduce greenhouse gas emissions.

Why purchase a Sanden Eco® Plus Hot Water Heat Pump System?

The superior design of a Sanden Eco® Plus Hot Water Heat Pump ensures:

- Industry leading energy efficiency using only 20% of the energy required by an electric storage hot water system.
- Innovative technology - up to 50% faster heat recovery than currently available Hot Water Heat Pumps.
- Perfect to use with Off-Peak Electricity for even more savings.
- The most STC rewards for energy efficiency, means you enjoy a greater discount on the purchase price.
- Class leading warranties, backed by Sanden’s 35 years of operation in Australia.
- Split system for ease of installation and near silent operation.

How a Sanden Eco® Plus System Works.

The Sanden Eco® Plus Hot Water Heat Pump System uses a small amount of energy to move heat from one location to another. Heat is absorbed by ozone-friendly R744 (CO2), a natural refrigerant which does not contribute to global warming. As the warm gaseous refrigerant circulates through the system it passes through the compressor, and its pressure and temperature rises. The hot refrigerant then passes through a heat exchanger which heats the water. The refrigerant is cycled back into the system, and hot water is pumped to the storage tank.

Sanden. Striving to develop ‘Environmentally Advanced’ Products.

Sanden is a Japanese owned global business, which has earned a solid reputation as a leader in the field of heating and cooling technology. Our focus is to improve the living standards of all Australians, via the development of environmentally advanced products. Sanden has been operating in Australia for over 35 years.

Established: July 30, 1943
Paid Up Capital: AUD 122.6 million†
Sanden Companies: 30 (In Japan), 54 (Overseas)
Number Of Employees: 4328 (In Japan), 8215 (Overseas)
Net Sales: AUD 3,410.9 million†

Sanden has 3 core businesses:

1. **Automotive Air Conditioning Systems**
   Sanden has more than 50 years experience in the production and global supply of air conditioning compressors. It currently supplies some of the world’s leading automotive brands, including VW, Honda, Ford, Audi, Rolls Royce, Peugeot, Citroen, Renault, Landrover, Fiat, Mercedes Benz & Kenworth.

2. **Commercial Refrigeration & Vending Machines**
   Sanden’s extensive range of innovative and environmentally sustainable refrigerator/freezer showcases and “energy & labour saving” vending machines is used in convenience stores, restaurants, cafes and supermarkets and preferred by world leading brands, including 7Eleven, Coca Cola, Pepsi and Schweppes.

3. **Household Living & Environment Systems**
   Sanden has applied its advanced understanding of heat transfer technologies to the home environment, resulting in the development of the highly innovative and superior Sanden Eco® Plus Hot Water Heat Pump system, which is manufactured in Japan.
**Superior Features and Benefits.**

Unlike other hot water heat pump systems, the Sanden Eco® Plus system uses a smarter split system where the heat pump unit and stainless steel tank are installed separately. This allows easy on-site handling and installation, as well as flexibility of the storage tank location, which can be up to 15 metres distance horizontally or 5 metres vertically from the heat pump unit.

**Heat Pump Unit**
- A high Coefficient of Performance (COP=5^) results in significantly reduced energy use and CO₂ emissions.
- Up to 50% faster heat recovery than typical heat pumps. In ambient air of 20 ºC it takes approx 4 hours to heat 315 L of water from 17 ºC to 65 ºC.
- Uses unique Ozone friendly R744 (CO₂) refrigerant.
- Simple installation by Plumber & Electrician, with no Refrigeration Mechanic required.
- An automatic heating cycle, which makes it perfect for use with Off-Peak tariff.
- Uniquely designed to operate in all climates (ie. -10 ºC to +43 ºC operating range).
- Includes Blockout Timer, for use with on-roof photo voltaic (PV) solar electricity systems.
- No backup element required.
- Whisper quiet operation, with industry leading noise level of 37 dB - very neighbour friendly!
- High quality, Japanese made weather resistant construction for outdoor location.
- 6 year Warranty (including parts and labour).

**Stainless Steel Tank**
- 4 x tank sizes offered – 160L, 250L, 300L and 315L.
- High quality, Australian made extra long life 316 Marine Grade stainless steel cylinder.
- Fully insulated for minimal heat loss.
- Mains pressure rated.
- Safety pressure and temperature relief valve supplied.
- 15 year Pro Rata Warranty (including parts and labour).

---

**How Sanden delivers better Performance and Savings.**

Sanden employs superior R744 (CO₂) refrigerant technology, so that the amount of electrical energy required to heat the water is significantly less than that required by a conventional electric storage hot water system. In fact, the Sanden Eco® Plus Hot Water Heat Pump System consumes 1kW of electricity to generate 4.5kW of heat (COP=5^), which equates to 20% of the energy used by a conventional electric storage system. Consequently, with the Sanden Eco® Hot Water Heat Pump System, you can save up to 80% of your conventional electric storage hot water energy costs!

**Eco-Friendly - Why employ R744 (CO₂) refrigerant?**
- It offers no ozone layer depletion and minimal global warming (ie. as per table below) versus other commonly used refrigerants, should the system leak.
- It performs higher compression efficiency, with lower energy consumption, thereby allowing more heat to be transferred to the water, for less energy used (i.e. excellent thermodynamic ability).
- The refrigerant temperature gets very hot, very quickly, so water temperature of 65ºC, is achieved almost instantly.
- Sanden is the only currently available HWHP in Australia, to employ "ozone friendly" R744 (CO₂) refrigerant.

**See also:**
Whisper Quiet Operation.

When purchasing a hot water heat pump system, noise levels are an important consideration. Sanden’s extensive research has delivered a ‘whisper quiet’ operating noise level (37dB) that ensures both you and your neighbours’ lifestyles remain unaffected by its operation.

Did you know that Heat Pump technology is more energy efficient than Solar?

During the period 2009 - 2013, the Campbell Creek Energy Efficient Home Project* compared the energy usage of three homes, each with different types of water heaters.

Test results for the period January to December 2012, confirmed that the Solar Flat Panel system used 38% more energy than the Hot Water Heat Pump.

CASE STUDY

Cost savings achieved by a Sanden Eco® Hot Water Heat Pump System versus a conventional electric hot water system.

The table presents electricity consumption figures recorded by a Sanden customer, who replaced his conventional electric Rheem Hot Water System with a Sanden Eco® Hot Water Heat Pump System, on 4.10.10. He lives in the Sydney Metro area, has a family of 4 people (ie. Husband, Wife & 2 x Children) using hot water and uses Off-Peak Controlled Load 2.

As can be seen, the reduction in usage achieved for the 2010/11 period, versus prior year, was approx. 80%, while the reduction in $ Cost for the same period was 77% and this was despite a change of supplier and a more expensive tariff (ie. increase of 18.7%).

Water supply quality

Chloride and pH

In high chloride water supply areas, the water can corrode some parts and cause them to fail. Where the chloride level exceeds 200 mg/litre warranty does not apply to the heat pump unit and tank unit. pH is a measure of whether the water is alkaline or acid.

In an acidic water supply, the water can attack the parts and cause them to fail. No warranty applies to the heat pump unit and tank unit where the pH is less than 6.5 or more than 8.5.

Water supply from a rainwater tank unit in a metropolitan area is likely to be corrosive due to the dissolution of atmospheric contaminants. Water with a pH less than 6.5 or more than 8.5 may be treated with a pH controller to maintain a pH between 6.5 - 8.5.

Change of water supply

Changing, or alternating, from one water supply to another can have a detrimental effect on the operation and/or life expectancy of the water tank unit cylinder, PTH valve, water heating circulation and the heat exchanger in the system. Where there is a changeover from one water supply to another, for example, a rainwater tank supply, desalinated water supply, public reticulated water supply or water brought in from another supply, then water chemistry information should be sought from the supplier or the water should be tested to ensure it meets the requirements of our Sanden Eco® Plus Hot Water Heat Pump System warranties.

Did you know

- House 1 (CC1) - Electric, 50 gal capacity, EF=0.86, usage= 60 gal/day, set temp=120°F
- House 2 (CC2) - Hybrid Electric Heat Pump Water Heater, 50gal, EF=2.4, set temp = 120°F, usage=60 gal/day
- House 3 (CC3) - Solar Water Heater, 85 gal, EF =0.91, sat temp = 120°F, 60 R° cylinder area, electric pumps, usage=60 gal/day

## Specifications

### Heat Pump

**Dimensions**
- **Weight**: 48kg

**Technical**
- **Heat Output at 30°C/24°C**: 4.8kW
- **Electric Input at 30°C/24°C**: 0.88kW
- **COP (Heating Efficiency) at 30°C/24°C**: 5.6^<sup>a</sup>
- **Refrigerant**: CO2 (R744)
- **Water Temperature Setting (Nominal)**: 63°C
- **Compressor**: Variable
- **Electrical Supply**: 240V/50Hz/Single Phase
- **Circuit**: 20Amps
- **Operating Noise Level**: 37dB
- **Ambient Air Operating Temperature**: Minus 10°C to Plus 43°C
- **Maximum Operating Water Pressure**: 700kPa

**Water Connections & Settings**
- **Inlet**: 16″ BSP, 12.7 mm
- **Outlet**: 16″ BSP, 12.7 mm
- **Country of Manufacture**: Japan

### Storage Tank

#### Model No.
- **GAUS-160FQS**
- **GAUS260FQS**
- **GAUS-300FQS**
- **GAUS-315FQS**
- **GAUS-315FQV**

**Height**
- H: 970mm
- A: 753mm
- C: 249mm
- B: 223mm
- D: 621mm

**Sensor Port**
- 708mm

**Cold Water Inlet / Heat Pump Flow**
- 223mm

**Diameter**
- 621mm

**Weight**
- 29kg

**Storage Capacity**
- 160L

**Water Connections & Settings**
- **Tank Relief Valve Setting (PTR Valve)**: 700(kPa)
- **Expansion Control Valve Setting (CCV)**: 600(kPa)

**Maximum Mains Pressure Settings**
- **With ECV**: 500(kPa)
- **Inlet Water Operating Pressure**: 500(kPa)
- **Adjustable Tempering Valve**: 1400(kPa)
- **Hot and Cold Connection**: Rp 20 (3/4″) Female
- **Watermark Licence No.**: WM-022333
- **Colour**
  - SurfMatt & Ironstone Ends
- **Country of Manufacture**: Australia
- **Warranty**: 5 Years (WA only)

**Note**: Materials and specifications are subject to change without notice.
